

Assignment-4

Assignment Date	25 October 2022
Student Name	Geetha P
Student Roll Number	731719106006
Maximum Marks	2 Marks

Question-4:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud

PROGRAM:

```
#include <WiFi.h>

Connecting to Wifi.....WiFi connected, IP address: 10.10.0.2
Reconnecting MQTT client to
3yngbh.messaging.internetofthings.ibmcloud.com
.....

Output:

Output: (IBM Cloud)

The screenshot displays the IBM Watson IoT Platform interface in a Mozilla Firefox browser. The dashboard shows a list of devices under the 'Browse' tab. Two devices are listed: '502645' (Disconnected) and 'NodeMCU_1' (Connected). The 'NodeMCU_1' device is selected, and its details are shown in a modal window. The modal window has tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is active, showing a table of raw data. The table has columns for Property, Value, Type, Event, and Last Received. Three events are listed: 'randomNumber' with value 88, 'temp' with value 26, and 'hum' with value 96. All events are of type 'Number' and occurred at 'event_1' a few seconds ago. At the bottom of the modal, it says 'Showing Raw Data | No Interfaces Available'. Below the modal, there is a pagination bar showing 'Items per page 50' and '1-2 of 2 items'. A status message at the bottom right indicates '1 Simulation running'.

Device ID	Status	Device Type	Class ID	Date Added
502645	Disconnected	NodeMCU	Device	Nov 8, 2022 4:12 PM
NodeMCU_1	Connected	NodeMCU	Device	Nov 10, 2022 9:54 AM

Property	Value	Type	Event	Last Received
randomNumber	88	Number	event_1	a few seconds ago
temp	26	Number	event_1	a few seconds ago
hum	96	Number	event_1	a few seconds ago
